Forms 6i

Introduction

Advantages, features, and role of D6i in ERP

Pre-requisites for D6i

Tools used in D6i

Fundamentals of D6i

How to install & work with D6i

Interface of forms

Types of Data Blocks

Creation of data blocks & Through Wizards

Creation of Master-Detail Data blocks

Creation of Data blocks Through Manually

Manipulating Properties

Creation of Visual Attributes

Creation of Property classes

Creations of Object Groups

Creating &Using Object Groups

Creation of Object Libraries

Creating Object Libraries

Using Object Libraries

Form Triggers

Types Of Form Triggers

Applying Triggers On Different Control

Alerts

Calling Alerts, Displaying Alerts

Re-using Alerts

Changing Properties Of Alerts at Runtime

Editors

Creating Editors

Types Of editors

Calling Editor thru Code

Using Image Items

Storing and Retrieving images in database

Transferring images from files in image items

Using Chart Control

Creating chart thru data blocks with wizard

Graphics

Introduction

Interfaces of Graphics

Creation of Graphics using

Different types of chart

Calling Graphics from forms

Canvases

Creation of content canvas

Creation of stacked canvas

Creation of Tab canvas

Creation of Horizontal toolbar Canvas

Creation of vertical toolbar canvas

Applying Password to Application

Windows

Changing Window Properties

Types of windows

Document, Dialog& modal, modeless

Navigation between windows of form

Menus

Creation of Menus

Usage of Menus in Required forms

Creation popup menus

Program Units

Defining procedures, functions & packages in forms

Using stored procedures functions& packages elements in forms

Creating stored procedures and function thru forms

PL/SQL Libraries

Usage of PL/SQL libraries In different forms using attached libraries

Database Objects

Using database objects available at backend

Creating database objects thru forms

Working with object technology

Defining &using object in forms

Record Groups

Creation of record groups based on query

Creation of record groups based on static values

Lovs

Creation of lovs using existing record groups

Creation of lovs manually

Creation of lovs along with record group

Creation of runtime record groups

Advanced Topics of Forms

Usage of active X control item

Usage of hierarchical tree control

Creation of forms thru stored procedures

Creation of tables thru forms

Error handling

Trapping different types of errors on forms

REPORTS 6i

Introduction

Advantages, features and role of reports in D6i

Fundamental of reports

Interface of reports

Creation of reports using Wizards

Tabular reports

Forms like reports

Mailing label reports

Form letter

Group left reports

Group above reports

Matrix reports

Matrix with groups

Creations of reports manually

Creation reports manually

Creation of reports using parameters

User parameters

System parameters

Manual reports

Creation of reports thru data model SQL query

Formula columns

Place holder columns

Data links

Cross product

Report Triggers

Before parameter forms

After parameter form

Before report

Between pages

After report

Creation of templates

Usages of templates in required reports

Communication interlinking of reports

Drill down reports

Calling reports from forms

Using run product ()

Communication/ interlinking of forms & reports

Creation of parameters

Calling different forms

Calling different forms with parameters

Calling different report with parameters

With text & data parameters

PROJECT DESCRIPTION & CONCLUSION

DURATION:30Days Faculty:Murali, FEE:3500/-
